## PREFACE

The UPIANA Classification Schedule forms part of a set of three special classification schedules developed by the Cataloging Section of the University of the Philippines Library in order to meet an urgent need in the classification of its various special collections. While the U.P. Library has chosen to adopt the U.S. Library of Congress Scheme, catalogers have found it to be inadequate in handling most of the local publications. The Cataloging Section, therefore, embarked on a project of expanding and/or developing classification schedules, based on the LC Scheme.

UPIANA is here defined to include all officially published and/or unpublished materials emanating from and/or pertaining to the University of the Philippines System. The classification schedule developed in 1961 expanded the LC schedule for individual institutions offering higher education. Since then it has undergone minor revisions in order to incorporate the additions and changes in the University organization. This present publication includes the additions and changes made as of December 1981. It does not cover serial publications which, as a standard practice, are not classified, nor does it provide for publications by individual faculty members, alumni, and students of the University on specific subject fields as these are preferably classified under the various classes in the LC Scheme.

The UPIANA Classification Schedule does not pretend to be a perfect model for other schedules that may be developed in answer to similar needs by other institutions of higher learning. Like the LC Scheme, it was formulated in the face of an already existing collection that needed to be classified. Hence, like LC, it is also basically functional and pragmatic. A more extensive revision and expanded version of the schedule was done by Vyva M. Aguirre in 1975 as the subject of a special problem submitted as requirement for a Masteral degree in Library Science.

It is envisioned that libraries who are just beginning to develop similar schemes would find these tools useful for their purpose.
